

## Barnacle Goose Session

*Adaptive Flyway Management Programme for the Russia*

*Barnacle Goose population*

Doc. AEWA/EGMIWG/6.14 **EGMP Secretariat & Data Centre**

## New Sections AFMP

- Changes highlighted in green
- Revision of the document in the Task Force (version circulated in April)
- Main sections added /updated:
  - 1. Introduction (updates on table 1 and table 2)
  - 2. FRR values for the three management units (Chapter 2, table 4)
  - 3. Workplans developed by the Task Force (Annex 1)
  - 4. Analysis of Box 1 (Annex 2)
  - 5. Update and progress on the impact models (Annex 4)

# AEWA European Goose Management Platform

21-23 June 2021

EGM IWG6

Online Conference Format

BG Russia AFMP  
Doc. AEWA/EGMIWG/6.14

## FRVs for the Russia/Germany & Netherlands population of Barnacle Goose

**Table 3.** Breeding FRP values for the three management units

| Country                 | Breeding FRP (in pairs) | Notes   | Wintering FRP (in individuals based on Koffijberg <i>et al.</i> , 2020) |
|-------------------------|-------------------------|---|---|
| Russia                  | 112,927                 | Calculated as 380,000/2.78 – (FRPs MU2 & MU3)                                     |   |
| <b>MU1 total</b>        | <b>112,927</b>          |   | <b>n.a.</b>   |
| Denmark                 | 2,000                   | FRP reported by the government  |   |
| Estonia                 | 89                      | National BD Art. 12 report <sup>6</sup>   |   |
| Finland                 | 7,000                   | FRP reported by the government  |   |
| Norway                  | n.a.                    | It is not recognised by the government as a naturally occurring breeding species. |   |
| Sweden                  | 2,900                   | FRP reported by the government  | 41  |
| <b>MU2 total</b>        | <b>11,989</b>           |   | <b>n.a.</b>   |
| Belgium                 | n.a.                    | It is not recognised by the government as a naturally occurring breeding species. | 555   |
| Germany                 | 775                     | Source: National BD Art. 12 report <sup>7</sup>                                   | 83,471  |
| Netherlands             | 11,000                  | FRP reported by the government  | 284,686   |
| <b>MU3 total</b>        | <b>11,775</b>           |   |   |
| <b>Population total</b> | <b>136,691</b>          |   | <b>380,000</b>  |

**Table 4.** FRR values for the three management units

| Country                 | Breeding FRR (in km <sup>2</sup> ) | Non-breeding FRR (in km <sup>2</sup> ) | Notes   |
|-------------------------|------------------------------------|--|---|
| Russia                  | 95,000                             | Not provided                           | The breeding FRR is estimated based on EBBA2 (50 x 50 km grid). The non-breeding FRR for moulting and staging areas is still to be estimated. |
| <b>MU1 total</b>        | <b>95,000</b>                      | <b>Incomplete</b>                      |   |
| Denmark                 | 1,800                              | 36,700                                 | FRRs reported by the government. However, these are distribution areas and not range.   |
| Estonia                 | 1,500                              | Not provided                           | Source: Distribution area in national BD Art. 12 report <sup>2</sup>  |
| Finland                 | 48,500                             | Not provided                           | According to Finland, it is not feasible to assess the non-breeding FRR for passage birds because it is highly variable.                      |
| Norway                  | introduced                         | n.a.                                   | It is not recognised as a naturally occurring breeding species by the government.   |
| Sweden                  | 87,500                             | 13,900                                 | FRRs reported by the government.  |
| <b>MU2 total</b>        | <b>139,300</b>                     | <b>Incomplete</b>                      |   |
| Belgium                 | introduced                         | 25,500                                 | It is not recognised as a naturally occurring breeding species by the government. The non-breeding FRRs reported by the government            |
| Germany                 | 4,228                              | Not provided                           | Source: Distribution area in national BD Art. 12 report <sup>5</sup>  |
| Netherlands             | 37,621                             | 38,011                                 | FRRs reported by the government   |
| <b>MU3 total</b>        | <b>41,489</b>                      | <b>Incomplete</b>                      |   |
| <b>Population total</b> | <b>227,889</b>                     | <b>Incomplete</b>                      |   |

## Annual workplans

| Cross-cutting action | Actions from the ISSMP   | Priority  | Timescale           | Activities carried out by         |                         |                                    |         |         |
|----------------------|--|-----------|---------------------|-----------------------------------|-------------------------|------------------------------------|---------|---------|
|                      |  |           |                     | Population/MU specific Task Force | Ad hoc cross cutting TF | Data Centre & Modelling Consortium | Belgium | Denmark |
| x                    | 1.1 Provide adequate protection and management to key sites of international importance under Article 4(1) of the Birds Directive in the EU and other relevant instruments in other Range States throughout the range of the populations and maintain them in good ecological status   | Essential | Short / Rolling     |                                   |                         |                                    |         |         |
|                      | 1.2 Promote goose-based eco-tourism at selected key sites  | Medium    | Medium              |                                   |                         |                                    |         |         |
|                      | 2.1 Take key sites for geese into account in land use planning and growing of sensitive crops[1]   | High      | Immediate / Rolling |                                   |                         |                                    |         |         |
|                      | 2.2. Provide accommodation areas to reduce risks and conflicts at sensitive areas through e.g. subsidies[2]  | Medium    | Medium/ Rolling     |                                   |                         |                                    |         |         |
|                      | 2.3 Apply scaring and/or land management techniques to reduce the attractiveness of sensitive areas to geese, monitoring the implications of such local displacement for conflicts at wider scale[3]   | High      | Short / Rolling     |                                   |                         |                                    |         |         |
|                      | 3.1. Reduce risk posed by goose migration to air safety through operational measures such as radar surveillance[4]   | High      | Short / Rolling     |                                   |                         |                                    |         |         |
|                      | 3.2 Establish an internationally coordinated programme to assess agricultural damage including monitoring and assessment protocols   | High      | Short               |                                   |                         |                                    |         |         |
|                      | 3.3 Liaise with farmers affected by goose damages to reduce agricultural conflicts   | High      | Short / Rolling     |                                   |                         |                                    |         |         |
|                      | 4.1 If necessary and if there is no other satisfactory solution, apply lethal population control under derogations according to the provisions of the Birds Directive, the Bern Convention and AEWA, for preventing serious damage to crops  | Essential | Short               |                                   |                         |                                    |         |         |
|                      | 4.2 Assess periodically, and report to the AEWA EGM IWG, the cumulative impact of derogations (as well as hunting in Range States in which derogation is not required) on the development of the population, the likelihood of serious damage to agriculture and risk to air safety and to other flora and fauna (including the Arctic ecosystems), and the non-lethal measures taken to | Essential | Short               |                                   |                         |                                    |         |         |

## Box 1

- The International Single Species Management Plans (ISSMP) envisages the use of more detailed analysis of data on **damage to agriculture** and **risk to air safety and to other flora and fauna** as set out in Box 1
- In 2020,
  - all range states responded to a questionnaire covering **damage to agriculture and risk to other flora and fauna**.
  - a questionnaire regarding **air safety** was treated separately by direct contact to the relevant national air safety organisations.
- In 2021,
  - a final report should be submitted and presented at the IWG6 as the final steps in the project
  - The document aims at reporting the obtained information in a transparent way, providing a baseline for the future work.

## Overview of provided information

**Table 1.** *Overview of provided information by each range state. The information in the upper row refers to the numbers in Box 1. ia & iia refer to agricultural damages, ib & iib to damages to other flora and fauna, iv-b to breeding and iv-w to winter.*

| Country | ia | ib | iia | iib | iii | iv-b | iv-w | SPAii-iii |
|---------|----|----|-----|-----|-----|------|------|-----------|
| BE      | X  |    |     | X   | X   | X    | X    |           |
| DE      | X  | X  | X   | X   | X   | X    | X    | X         |
| DK      |    | X  |     |     | X   | X    | X    | X         |
| FI      | X  |    | X   | X   | X   | X    | X    |           |
| NL      | X  |    | X   |     |     | X    | X    |           |
| NO      | X  |    | X   |     | X   | X    | X    |           |
| SE      | X  |    |     |     | X   |      | X    | X         |

## Summary

- The Barnacle Goose Russia/Germany & Netherlands population is significantly increasing on the long-term and short-term.
- There are limited knowledge and data on the actual costs in most range states but increasing costs correlated to the number of Barnacle Geese during winter in the Netherlands.
- Due to a high variation between the views from the different range states, there is high degree of uncertainty towards what methods that have an effect and only very limited conclusions can be drawn at this stage.
- To increase the understanding, range states will need to discuss and prioritize research projects and to conduct focused and coordinated studies.
- There is a need for a coordinated derogation with a consistent approach at MU level flyway level.

## Summary – air safety

- Barnacle goose was one of the goose species most frequently reported to have been involved in birdstrikes.
- Many airports expect an increase in problems associated with the presence of geese in the future.
- Airports situated along the migration route of the population more often experience problems with barnacle geese.

## Lessons learned – all populations

- The box 1 analysis is extremely complex with a lot of different questions and items
- The replies reflected that it was complicated for the responders to reply to all items and/or that a large part of the items was not managed in the range states
- Most range states replied as much as possible, however, the management is clearly different between range states and the format of the replies varied considerably, which made the analyses difficult
- The report include a lot of results and if the range states allow each reply to be made public available, it may be used for more detailed analyses by others

## Coordination among Range States regarding derogation shooting and legal hunting.
